

# Software Engineer - Backend

Sample Job Description | NovaByte Technologies

## JOB SUMMARY

NovaByte Technologies is seeking a Software Engineer to build reliable backend services for a cloud-based recruitment platform. The engineer will work with product and frontend teams to design APIs, improve application performance, and deliver maintainable software.

## RESPONSIBILITIES

- Design and develop backend services using Java and Spring Boot.
- Build and maintain REST APIs and microservices.
- Write SQL queries and work with PostgreSQL or MySQL.
- Containerize services with Docker and participate in CI/CD workflows.
- Use Git and GitHub for version control and code review.
- Write unit tests, debug production issues, and document technical decisions.
- Collaborate with frontend, QA, and product teams.

## REQUIREMENTS

- Strong programming fundamentals and object-oriented design.
- Hands-on experience with Java.
- Knowledge of Spring Boot and REST API development.
- Working knowledge of SQL and relational databases.
- Familiarity with Git.
- Understanding of data structures and algorithms.
- Good problem-solving and communication skills.

## PREFERRED QUALIFICATIONS

- Docker and Kubernetes exposure.
- Familiarity with AWS or another cloud platform.
- Experience with microservices.
- Knowledge of Python or JavaScript.
- Familiarity with Jenkins or GitHub Actions.

## TECHNICAL SKILLS

Java, Spring Boot, REST API, SQL, PostgreSQL, MySQL, Git, GitHub, Docker, Kubernetes, AWS, Microservices, Jenkins

## EDUCATION

Bachelor's degree in Computer Science, Information Technology, Software Engineering, or a related field.

## EXPERIENCE

0-2 years of relevant software development experience. Strong academic or personal projects are acceptable for entry-level candidates.
